TONERmiser™

Optimising print costs even when device consolidation is not an option

TONERmiser™ is a revolutionary software product that uses patented technology to preserve print quality whilst reducing toner consumption by up to 50%. Designed for enterprise environments, significant savings can be achieved quickly and for minimal up-front investment.

TONERmiser provides organisations with a low impact method of reducing print costs quickly, as opposed to the significant change management involved in device consolidation. Trying to reduce toner costs through draft or economy modes in some print drivers provides limited toner reduction (typically 10 – 15% of only black toner) but at the expense of print quality; whereas TONERmiser's unique algorithms achieve up to 50% saving whilst preserving print quality.

Why you should be interested in TONERmiser?

Organisations spend from £200 to £700 per user per annum on office printing ¹. The single largest cost component is toner, which can represent up to 75% of this figure. Using TONERmiser a 1,000 user organisation could achieve net savings of over £130K per annum.

Simplicity

USER'S PERSPECTIVE

TONERmiser is invisible to users. Its small driver sits between the application generating the print job and your normal print driver. Users print as normal but the toner optimisation settings, set centrally, are applied at time of print.

ADMINISTRATION

Managing TONERmiser couldn't be easier. Using Active Directory Users and Computers, policies can be applied to user accounts, user groups or devices. Policies are administered centrally and applied instantly. No database installation is required; just a central folder location for log files to be stored. No change to the Active Directory schema is required.

IMPLEMENTATION

Once TONERmiser has been through your internal testing process it can be rolled-out in a matter of minutes through an Active Directory group policy. The driver needs to be installed on client workstations and print servers in your environment with a central server required for administration to be provided. Due to the architecture of the product it is unlikely that more than one server is required even for very large enterprises.

QUALITY

TONERmiser uses algorithms covered by 11 international patents to preserve quality even on a maximum toner optimisation setting. Some organisations have implemented TONERmiser with a 25% setting without users noticing. Quality is maintained through the preservation of edges and sensitive graphical components such as thin lines. The overall results are excellent and thus TONERmiser provides a quick and easy way to deliver savings to your organisation.

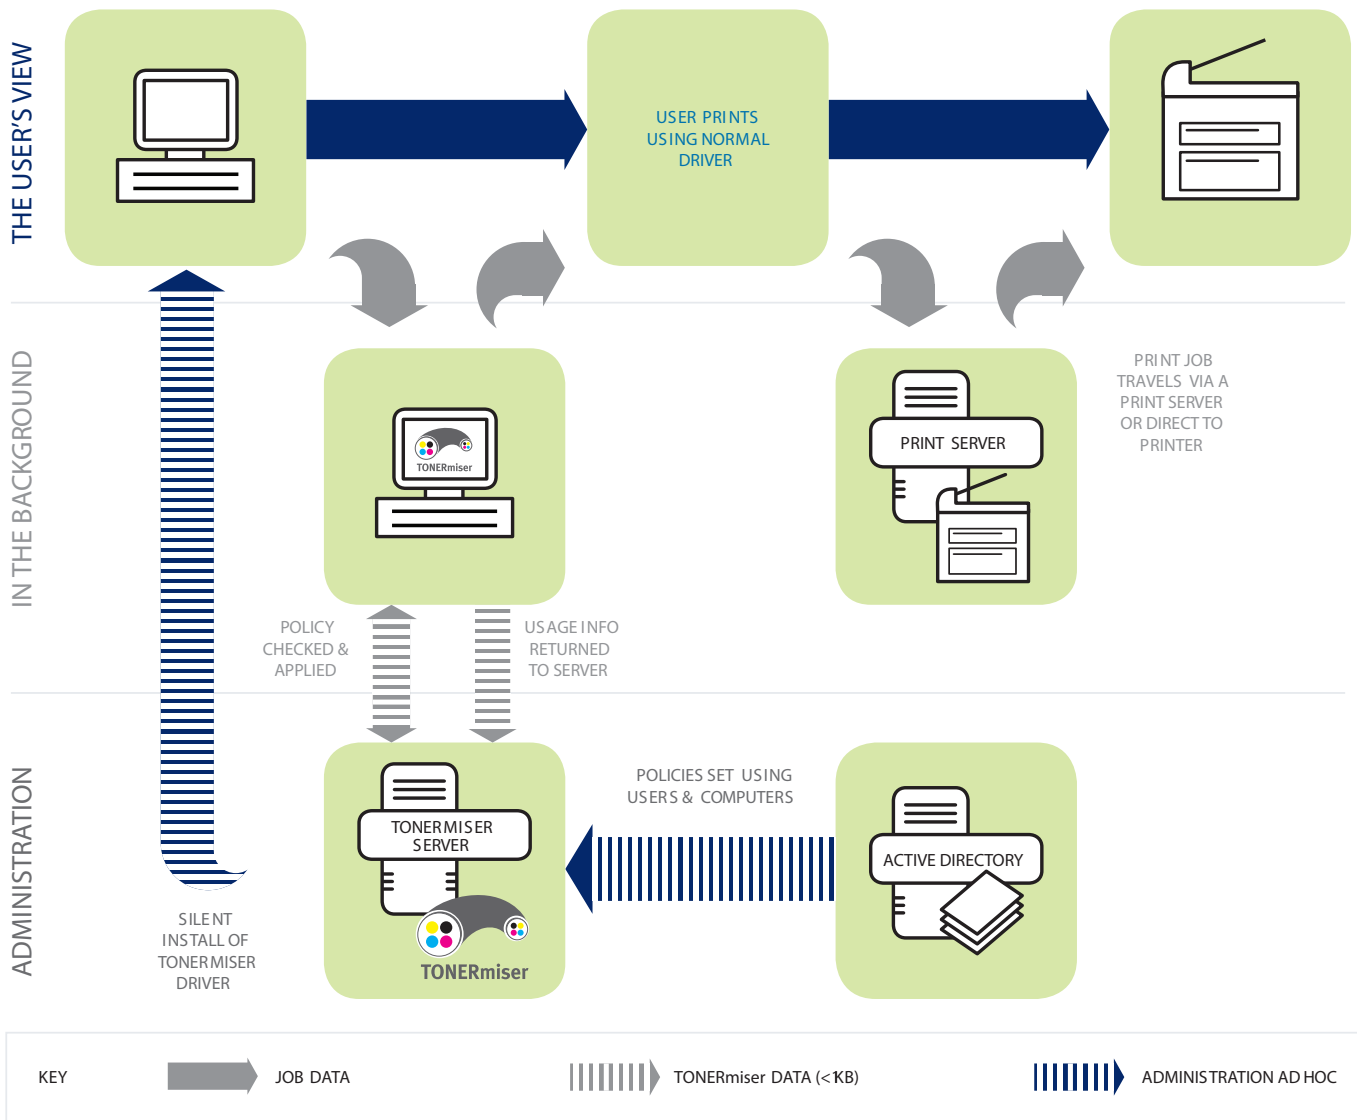

Policy Name	Description	Savings Level	Priority
No savings	0% Savings	0	Normal
High quality	10% Savings	10	Normal
Low Savings	15% Savings	15	Normal
Standard Savings	25% Savings	25	Normal
High savings	40% Savings	40	Normal
Maximum Savings	50% Savings	50	Normal
